

Inside Gardner Utilities

Official Utility News for the City of Gardner

FREE Fan for Those in Need

Thanks to the good will of the CenturyLink Gardner Data Center employees, the City of Gardner has fans to give to those in need for the hot days ahead. Barb Frans, Data Center Supervisor, called Mayor Drovetta to ask if they could donate \$2,000 for that purpose. "When we install upgrades, we recycle the old materials rather than send them to a landfill. Since they have value, we're able to sell them and the give funds to the communities we serve," says Frans. "We thought fans for those in need would be a good way to help Gardner."

Fans will be available starting June 1st at City Hall for any utility customer over 60 years of age, or any customer listed with a medical frailty. Fans will be distributed on a first come, first serve basis.

Thank you Barb Frans and the CenturyLink Data Center Team!

How Much Energy are Your Incandescent Light Bulbs Costing YOU?

On display in City Hall (shown in picture to the right) is a meter that displays the energy used by incandescent, LED and CFL light bulbs. Each meter started at zero and is turned on during business hours every day. Stop by City Hall during the Take Charge Challenge to see how the light bulbs compare and to pick up your three FREE CFL light bulbs from the Utility Billing counter!

Greenie with the energy meter display!

Ever Considered an Energy Audit of Your Home or Business?

To help Gardner win the Take Charge Challenge, residents are encouraged to participate in the Efficiency Kansas program, which offers Kansas residents the opportunity for energy audits at a discounted rate. For only \$100 you can receive a complete audit with action steps prioritizing the biggest savings for your hard earned dollars **AND be entered to win one of ten \$1,000 rebates for energy efficient appliances!**

Efficiency Kansas offers loan programs to complete the work at a low interest rate as well, for those with big projects that can be discovered during the audit process. By taking advantage of this program, you could be eligible for a \$500 rebate if you spent \$1,000 on the improvements recommended in the audit process.

To register for an audit with a company that operates in Gardner and surrounding areas, contact American Energy Auditors (AEA) at 913-543-3572 or www.aeauditors.com. For a full list of participating auditors, please visit www.efficiencykansas.org.

Keep up with all the latest Take Charge Challenge information at www.gardnerkansas.gov/gardner_green.

Ten Facts About Gardner Energy

1. Has been serving the Gardner community for almost a century
2. Rates are very competitive with other electric providers in the area
3. Prides itself on great customer service, for example:
 - The average overall response time is less than 30 minutes
 - The average workday response time is less than 10 minutes
4. The staff values its customers and believes in personal interaction
5. Strive to forecast and purchase future energy needs, enabling them to provide the most economical power to our customers, for example:
 - Has 4 long-term wholesale power agreements, including Grand River Dam Authority and Omaha Public Power District
 - Agreements vary in duration from 2 to 15 years
6. Have a proactive approach to maintenance and tree trimming that provides for ongoing service reliability
7. Supports the community through our involvement in the Festival on the Trails and other annual events
8. Supports the green energy initiative, for example:
 - Renewable energy is part of Gardner Energy's Wholesale Power Portfolio
 - Has developed and implemented renewable energy standards
9. Is a participant in the Kansas Mutual Aid Program for Utilities
10. **Can be contacted to report a service interruption or other problem by calling 856-6802 twenty-four hours a day**

Call Before You Dig

A recent streetlight outage in a Johnson County neighborhood should serve as a reminder to residents planning spring and summer projects to consider what lies beneath. Residents installing a new section of fence seemingly damaged an underground line feeding the streetlight, resulting in the neighborhood being without the light for several weeks.

An even greater concern is the safety of a resident or contractor when digging into buried power lines. As you begin planning new fences, basketball goals or other projects, be sure to consider the location of underground utilities. To find out where those utilities are located, contact Kansas One-Call by dialing 811 or visiting www.kansasonecall.com.

Lawn Watering Tips

Lawn grass and plants in general like infrequent deep watering rather than frequent shallow watering. As a rule, if you water shallow, you'll have shallow roots and if you water deep, you'll have deeper roots. Whenever you water your yard, apply enough to moisten as much of the root zone as possible. Use a probe or shovel to determine what the average rooting depth is in your yard and then water as long as needed so the soil is moistened to that depth. Grass lawns like a deep watering and then time to dry out somewhat between watering.

As a rule, and depending on your soil type, weather, and grass type, your total water from rain and irrigation per week during the growing season should be 0.75 - 1.5 inches.

How often you have to water to get this amount of saturation depends on a few things. On sandy soils you should split your water cycle into more than one cycle. If you apply the entire amount, the water will flow right by the roots and little will be used. The most efficient time of day to water is late evening and early morning. It generally is less windy, cooler, and more humid at this time. You'll have less evaporation and more efficient use of water. Also, water pressure is generally better because fewer people are using water at this time so you'll get better coverage.

CITY OF GARDNER

Consumer Confidence Report - 2011

Covering Calendar Year - 2010

This report is a snapshot of the quality of the water that we provided last year. Included are the details about where your water comes from, what it contains, and how it compares to Environmental Protection Agency (EPA) and state standards. The City is committed to providing you with information because informed customers are our best allies. It is important that customers be aware of the efforts that are made to continually improve their water systems. To learn more about your drinking water, please attend any of the regularly scheduled Council Meetings which are held the 1st and 3rd Mondays of each month. For more information contact, Jim Melvin at 913-856-0917 or visit www.gardnerkansas.gov.

Your water comes from surface water.

Your water is treated to remove several contaminants and a disinfectant is added to protect you against microbial contaminants. The Safe Drinking Water Act (SDWA) required states to develop a Source Water Assessment (SWA) for each public water supply that treats and distributes raw source water in order to identify potential contamination sources. The State of Kansas has completed an assessment of our source water. For results of the assessment, please contact us or view on-line at: <http://www.kdheks.gov/nps/swap/SWreports.html>

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as those with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in sources of water before we treat it include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife

Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and herbicides, which may come from a variety of sources such as storm water run-off, agriculture, and residential users.

Radioactive contaminants, which can be naturally occurring or the result of mining activity

Organic contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and also come from gas stations, urban storm-water runoff, and septic systems.

In order to ensure that tap water is safe to drink, EPA prescribes regulation which limits the amount of certain contaminants in water provided by public water systems. We treat our water according to EPA's regulations. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Our water system tested a minimum of 20 samples per month in accordance with the Total Coliform Rule for microbiological contaminants. Coliform bacteria are usually harmless, but their presence in water can be an indication of disease-causing bacteria. When coliform bacteria are found, special follow-up tests are done to determine if harmful bacteria are present in the water supply. If this limit is exceeded, the water supplier must notify the public.

Water Quality Data

The following tables list all of the drinking water contaminants which were detected during the 2010 calendar year. The presence of these contaminants does not necessarily indicate the water poses a health risk. Unless noted, the data presented in this table is from the testing done January 1- December 31, 2010. The State of Kansas requires the City to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old.

The bottom line is that the water that is provided to you is safe.

Terms & Abbreviations

Maximum Contaminant Level Goal (MCLG): the "Goal" is the level of a contaminant in drinking water below which there is no known or expected risk to human health. MCLGs allow for a margin of safety.

Maximum Contaminant Level (MCL): the "Maximum Allowed" MCL is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology..

Secondary Maximum Contaminant Level (SMCL): recommended level for a contaminant that is not regulated and has no MCL.

Action Level (AL): the concentration of a contaminant that, if exceeded, triggers treatment or other requirements.

Treatment Technique (TT): A required process intended to reduce levels of a contaminant in drinking water.

Maximum Residual Disinfectant Level (MRDL): Highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Non-Detects (ND): lab analysis indicates that the contaminant is not present.

Parts per Million (ppm) or milligrams per liter (mg/l)

Parts per Billion (ppb) or micrograms per liter (µg/l)

Picocuries per Liter (pCi/L): a measure of the radioactivity in water.

Millirems per Year (mrem/yr): measure of radiation absorbed by the body.

Million Fibers per liter (MFL): measure of presence of asbestos fibers that are longer than 10 micrometers.

Nephelometric Turbidity Unit (NTU): A measure of the clarity of water. Turbidity of 5 NTU is just noticeable to the average person. Turbidity is not regulated for groundwater systems.

Biological	Result	MCL	MCLG	Typical Source
No Detected Results were Found in the Calendar Year of 2010				

Regulated Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
ATRAZINE	6/15/2010	0.36	0.36	ppb	3	3	Runoff from herbicide used on row crops
BARIUM	2/15/2010	0.056	0.056	ppm	2	2	Discharge from metal refineries
CHROMIUM	2/15/2010	1.9	1.9	ppb	100	100	Discharge from Steel and pulp mills
FLUORIDE	1/20/2010	1.5	1.2-1.5	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth
NITRATE	2/15/2010	0.16	0.15-0.16	ppm	10	10	Runoff from fertilizer use
TURBIDITY	2/15/2010	0.32	0.32	NTU	1		Soil runoff

Disinfection Byproducts	Monitoring Period	Highest RAA	Range	Unit	MCL	MCLG	Typical Source
TOTAL HALOACETIC ACIDS (HAA5)	2010	23	14-33	ppb	60	0	By-product of drinking water disinfection
TOTAL TRIHALOMETHANES (TTHM)	2010	35	25-46	ppb	80	0	By-product of drinking water chlorination

Lead and Copper	Monitoring Period	90th Percentile	95th Percentile	Range	Unit	AL	Sites Over AL	Typical Source
COPPER	2005-2007	0.3	NA	0.0031 – 0.091	ppm	1.3	0	Corrosion of household plumbing
LEAD	2005-2007	17	NA	1 -11	ppb	15	0	Corrosion of household plumbing

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Testing Results for the CITY OF GARDNER

Secondary Contaminants	Collection Date	Highest Value	Range	Unit	SMCL
ALKALINITY, TOTAL	2/11/2009	130	130	MG/L	300
ALUMINUM	2/11/2009	0.01	0.01	Mg/l	0.05
CALCIUM	2/11/2009	46	46	MG/L	200
CHLORIDE	2/11/2009	22	22	MG/L	250
CONDUCTIVITY @ 25 C UMHOS/CM	2/11/2009	380	380	UMHO/CM	1500
CORROSIVITY	2/11/2009	0.098	0.098	LANG	0
HARDNESS, TOTAL (AS CaCO3)	2/11/2009	140	140	MG/L	400
MAGNESIUM	2/11/2009	5.7	5.7	MG/L	150
NICKEL	2/11/2009	0.0017	0.0017	MG/L	0.1
pH	2/11/2009	7.9	7.9	pH	8.5
POTASSIUM	2/11/2009	4.1	4.1	MG/L	100
SILICA	2/11/2009	1.6	1.6	MG/L	50
SODIUM	2/11/2009	21	21	MG/L	100
SULFATE	2/11/2009	18	18	MG/L	250
TDS	2/11/2009	200	200	MG/L	500

During the 2010 calendar year, the City of Gardner had no violation(s) of drinking water regulations.

Total organic carbon (TOC) has no health effects. However, total organic carbon provides a medium for the formation of disinfection byproducts. These byproducts include trihalomethanes (THMs) and haloacetic acids (HAAs). Drinking water containing these byproducts in excess of the MCL may lead to adverse health effects, liver or kidney problems, or nervous system effects, and may lead to an increased risk of getting cancer.

Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight defects in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.

PUBLIC NOTICE:

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During the second half of 2010 we did not monitor or test for Lead and Copper, and therefore cannot be sure of the quality of your drinking water during that time.

Sampling during the first half of 2010 showed lead and copper levels were below regulated levels.

City staff began sampling in 2011. Samples and tests will be taken and reported twice during 2011, and once during 2012 and 2013. We anticipate that sampling will return to normal frequency after 2013.

Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.

Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.

There is nothing you need to do at this time. Samples from the first half of 2010 indicate that lead and copper were well below the action levels at that time. Samples from the first half of 2011 have not been reported as yet.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

If you have questions in regard to this notice, please contact Jim Melvin, Water/Wastewater Manager, at:

Gardner Public Works Department
120 E. Main Street
Gardner, KS 66030
